Academic Projects

Machine learning for Plant Disease Identification Tracking And Forecasting For Farmers .

- . Most diseases are diagnosed by agricultural experts by examining external symptoms. However, farmers have limited access to experts
- Farmers can instantly and accurately identify diseases and get solutions with a mobile app by photographing affected plant parts
- In this project author using convolution neural network as artificial intelligence to train all plant diseases images and then upon uploading new images CNN will predict plant disease available in uploaded images.
- For storing CNN train model and images author is using cloud services CNN model will get trained and user can upload images and then application will apply cnn model on uploaded images to predict diseases.
