Projects
ONLINE ELECTION SYSTEM This project is to provide an alternative voting channel to increase voter participation and reduce election costs while upholding the highest security, verifiability, and integrity standards. The existing system of electronic tabulation brings a new kind of voting system in which the electronic cards with all candidate's symbols are marked manually and this can be counted electronically. The proposed model has greater security in the sense that the voter high security password is confirmed before the vote is accepted in the main database of the Election Administrator. In this model, a person can also vote from outside of his/her allotted constituency or from his/her preferred location. Tabulation to online voting A program that converts an electronic tabulation system to an online voting system by using Java programming.
