PERSONAL PROJECTS

Solar Panel using for Generating and store Electricity
(07/2021 - 01/2022)

- Solar panels are devices designed to convert sunlight into electricity through a process known as photovoltaics. Here's a brief description of how solar panels work for generating and storing electricity.

Rain Detector (07/2022 - 01/2023)

- This sensor detects the rain and gives an alert to concerned persons in different fields like irrigation, automobile communication, home automation, etc. This article discusses an overview of a rain sensor and its circuit working.

Water Quality checker (09/2023 - Present)

- The most attractive feature of our water quality checker project is that it gives a values in LCD. when the water purity level goes below a threshold value. You can implement this simple electronic project in your domestic water tank for water quality monitoring and testing.

IOT based surveillance car (09/2023 - Present)

- A surveillance car typically refers to a vehicle equipped with technology for monitoring and gathering information. This can include cameras, audio recording devices, GPS tracking, and other surveillance tools. These vehicles are often used by law enforcement, private investigators, or security agencies for various purposes, such as monitoring and investigation.
