PROJECTS / OPEN-SOURCE

Enhancement of Restaurant Operations through QR Code Implementation (XML, Java, Android Studio, HTML, Firebase & Razorpay API)

This project has been created to elevate the overall user experience and streamline operational efficiency within a restaurant setting. The application is designed to furnish users with comprehensive access to the entire menu, alongside solitary order placement and seamless payment processing.

Fake News Detection Using Machine Learning | Link sci-kit ,Naive Bayes, Random Forest, Decision Tree & Logistic Regression

This project employs a sophisticated approach by leveraging various natural language processing techniques and machine learning algorithms for the purpose of classifying fake news articles.

Weather Monitoring Website | Link HTML,CSS,Javascript, Weather API

Developed a user-friendly weather monitoring application website allowing users to input their desired address and retrieve accurate and up-to-date weather reports for that location. The platform enhances user experience by providing real-time weather information tailored to individual preferences.

Car Racing Game | Link HTML,CSS,Javascript

In this project I have developed a car racing game, where an user can play the game and enjoy. The current score will be recorded and the heighest score that is scored by the user will be stored in the database.
