PROJECTS

Project1: Blood bank management

language: Python, Java
Tools : HTML, CSS, SQL

Description:

- Gone through specifications
- Verified the important features
- Created the website with useful information
- Provided the service with UI

About: The Blood Bank Management System is great Project. This Project is designed for Successful completion of project on blood bank management system. The basic building aim is to provide blood donation service to the city recently. BBMS is a browser based System that is designed to store, process, retrieve and analyze information concerned with the administrative and inventory management within a blood bank.

Needs of BBMS: Bank blood donation system in PHP is planned to collect blood from many donators in shorts from various sources and distribute that blood to needy people who require blood. To do all this we require high quality software to manage those jobs.

- Blood Donor.
- Blood Recipient.
- Blood collection.
- Camp.
- Stock details.

Project 2 : Online food ordering system

Language : Python,Java

Tools : HTML,Javascript,CSS

Description:

- Gone through specifications
- Verified the important features
- Created the website with useful information
- Provided the service with UI

Objectives: The management of the information regarding items category, food, delivery address,orders, and shopping cart is the system's primary goal. It oversees the management of all customer, shopping cart and item category information.Since the project was entirely developed on the administrative end, only the administrator is assured access.

Functionalities:

- Provides search options based on a variety of criteria. Like Food Items, Customers, Order and Confirmation.
- Online food ordering system also manage payment information for order details, order Confirmation details, and food items online.
- It keeps track of all data regarding categories.
- Manage the category's details.
