TECHNICAL & INTERPERSONAL SKILLS

Selenium IDE	HTML, CSS	Critical Thinking
SQL (Intermediate)	Test environment management	Communication
Java (Intermediate)	Regression Testing	C, C++ (Intermediate)
Manual Testing	SDLC	Defect management

SUMMARY

Motivated IT graduate with strong analytical skills and with proficiency in Manual & Automation testing. I aspire to join an organization that fosters professional growth, provides education, and instills discipline. Additionally, I am eager to take on responsibilities that will aid in my personal development.

PROFESSIONAL EXPERIENCE & PROJECTS

May 2022

Suspicious email detection using NLP

Detecting suspicious emails using Natural Language Processing (NLP) is crucial for preventing phishing attacks. The goal is to build an email spam detector using machine learning techniques. By analyzing email content, we'll classify emails as spam or non-spam.

Implementation Steps

- **Data Preprocessing:** Clean and prepare the email dataset to train the model.
- **Text Processing with NLP:** Tokenize, remove stop words, and vectorize the email text.
- **Exploratory Data Analysis (EDA):** Understand the data distribution and patterns.
- **Model Training:** Train machine learning models to classify emails.
- **Evaluation:** Assess model performance using metrics like accuracy, precision, and recall.

EDUCATION

Bachelor of Science (Mumbai University - 2022)

HSC (Tilak College - 2019)

CERTIFICATION

Professional Software Test Specialist (Squad Infotech PVT LTD - 2023)
