Projects

AUTOMATIC BOTTLE FILLING MACHINE

We are group of 7 members and I am the leader of our group. Automatic bottle filling machine works at the design, development and testing of working model. This model is designed by using microcontroller, IR sensors to avail automation in industries. By employing the automatic bottle filling machine at the desired spot, the arrival of bottle is detected by the sensor placed. This system is used to reduce the human efforts and to increase the accuracy and efficiency of the machine.

Achievements & Awards

I was declared as a social influencer in my B. Tech 3rd year,

Featured in university advertising video.

I was selected as a school SPL(School Pupil Leader) in my 9th class.
