Energy Efficiency and your Sky Tunnel

AECS Sets New Energy Standards

The American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE) has announced that it will be updating its energy efficiency standards for all new buildings. The new standards will be published in the fall of 2009 and will take effect in January 2010. These standards will take into account the latest research and technology available and will be more stringent than previous standards. The new standards will require buildings to be more energy efficient and will result in significant energy savings. The new standards will also require buildings to be more sustainable and will result in significant environmental benefits.

“ A doctor, like anyone else who has to deal with human beings, each of them unique, cannot be a scientist, he is either, like the surgeon, a craftsman or, like the physician and the psychologist, an artist... This means that in order to be a good doctor a man must also have a good character, that is to say, whatever weaknesses and foibles he may have, he must love his fellow human beings in the concrete and desire their good before his own.”
